

Arka Technologies

Building intelligent software for enterprise operations.

A Partner for Your Enterprise Operations.

Bring AI to your digital ecosystem.

We develop AI software, integrate it with the systems you already run, and create a seamless workflow experience.

SOFTWARE

Build custom AI solutions

Software that complements your existing profit-making machine. Not because of AI, but because real humans make it happen.

PRODUCTS

Deploy world-class products

Google Workspace, Zoho, CRM and sales platforms are the everyday tools your team already trusts. We deploy and configure them so your team can start using them from day one.

SUPPORT

Back-office and operations

Continuity of back-office operations and monthly maintenance across your digital ecosystem. And yes, that includes the cloud infrastructure supporting it.

37

CLIENTS & COUNTING

425

PROJECTS DELIVERED

20

YEARS IN INDUSTRY

Most operations teams are held back by the same problems.

Four patterns show up in almost every operation we are called into.

Reporting

12 HRS/WK, ALREADY STALE

By the time the report lands, it's already three days wrong, and we're still making decisions on it.

Decisions

3 SYSTEMS, 0 SINGLE SOURCE

We know the answer is in the data. But the data is in three systems and nobody has time to reconcile them.

Handoffs

EVERY TRANSFER IS A RISK

Every time work moves between teams, we lose an hour and introduce a new version of the truth.

Your people

BEST TALENT ON LOWEST-VALUE WORK

Our most capable people spend their day copy-pasting data and chasing approvals. A well-built system would handle that work automatically.

These aren't effort problems. They're systems problems, and systems can be fixed.

Four stages. One continuous engagement.

Most transformation efforts fail at the handoff, between diagnosis and build, between launch and ownership. We close every gap and stay in the room.

01

ROI Blueprint

WEEKS 1-2

We map your workflows, tools, costs, handoffs and decision points to find exactly where intelligent automation creates the strongest return. You leave with a prioritised plan.

02

AI Automation

WEEKS 3-8

We design and deploy automation around repeatable decisions, documents, customer operations and data movement, built to your workflows rather than adapted from a template.

03

Workflow Intelligence

WEEKS 6-12

We connect your systems into a clear operating layer, so your team moves faster without losing judgment, context or quality in the handoff.

04

Back-Office Operations

ONGOING

We don't launch and leave. We take ownership of ongoing performance, maintenance and optimisation, so value compounds without adding to your operational burden.

Bring your 3 Cs to one place.

Communication · Collaboration · Content

The world class products, for decades. We set up the products your teams are already comfortable with, then connect them so they behave like one system.

Zoho One

DEPLOYED

[Built for you, built for business & built for Bharat.](#)

One licence, forty-odd applications, and a price that makes sense for a growing Indian business. We configure the pieces you will actually use and leave the rest out of your way.

Google Workspace

DEPLOYED

[Get your familiarity with similarity.](#)

Gmail, Drive, Meet and Calendar behave exactly the way your team expects, because they already use them. We handle the domain, the migration and the admin policies underneath.

CRM & Sales Tools

COMING SOON

[Ask us. We have special products on the way.](#)

Pipelines, quotes and follow-ups that your sales team will actually keep up to date. Tell us how you sell today and we will tell you what is coming.

What our customers say afterwards.

Arka eliminated 40 hours of manual reporting from our week in under two months. The system keeps improving; we haven't touched it since deployment.

VP OPERATIONS · GLOBAL LOGISTICS

We went from email chains and spreadsheets to a fully automated back-office in six weeks. Our team now focuses on decisions, not data entry.

CHIEF OPERATING OFFICER · HEALTHCARE DISTRIBUTION

The ROI Blueprint alone changed how we think about operations. They found inefficiencies we'd been ignoring for years and had a fix deployed within a month.

DIRECTOR OF OPERATIONS · B2B TECHNOLOGY

Start with an ROI Blueprint.

Before any build, any tooling, any commitment, we find out whether the business case is there and how big it is.

01

Book a 40-mins scoping call. No commitment required.

02

We map your highest-value workflow opportunity.

03

You receive a tailored ROI Blueprint within 5 business days.

WHAT YOU RECEIVE

A ranked list of automation opportunities with projected cost savings and implementation timelines for each. A prioritised plan, not a vague proposal.
